

Stick Out Your Tongue!: Fantastic Facts, Features, and Functions of Animal and Human Tongues

Tongues aren't just for licking ice cream cones. Tongues are for tasting, but that's not all they do. Animals use their tongues in all sorts of amazing ways. Young readers will delight in discovering fascinating facts about the unusual features and functions of animal and human tongues. In addition to tasting, tongues are also used for collecting food and catching prey, cleaning fur and eyes, and even touching and smelling. A simple phrase at the beginning of each spread draws the readers' attention, while a longer paragraph explains the amazing feature illustrated. This entertaining investigation written by author Joan Bognignore offers astounding tongue facts that will amaze and enchant young readers. Realistic and accurately detailed illustrations by John T. Ward depict each animal's tongue in action. Did you know these incredible tongue facts? The anteater's tongue can stretch to the height of a two-year-old child. The archerfish uses its tongue like a squirt gun to shoot down its prey. The Australian naked-toe gecko swipes its tongue back and forth like windshield wipers to clean its eyes. The next time someone sticks his tongue out at you, remember that he is showing you a very special part of himself. Go ahead and stick yours out too!
