

## Care for a Pet Chameleon (How to Convince Your Parents You Can...)

Many people believe that chameleons change their colors to blend in with their surroundings. They are part right. Chameleons are nature's quick-change artists. They can change their colors within a few moments. These color changes don't have anything to do with their surroundings. Chameleons change colors either to express their feelings or to help control the amount of heat they receive. This ability to change colors is only one of the things that make chameleons so interesting. Because they are so interesting, many people like chameleons and keep them as pets. Perhaps you can too. This book gives you lots of information about chameleons and what you need to do keep them as a pet.
