

Polymer Wear and Its Control (ACS Symposium Series)

Looks at the development of high-strength polymers for use in human implants, all-composite airplanes, items now made of metal, and more. Covers the chemical characteristics and behavior mechanisms of these polymers. Contains reviews and research results on polymer wear and the various approaches to its control. Also describes biological behavior, wear of biomaterials and composites, characterization and measurements of wear, and degradation and wear of polymeric films and filaments.
