

Bacteria Here, There and Everywhere (Science for Young Scholars) (Volume 3)

Bacteria have been living on the earth for some three and a half billion years. They were among the first organisms on earth, perhaps they or bacteria-like organisms were indeed the first. And now they live almost everywhere. Bacteria share the earth with us. We are surrounded and sustained by them. This book covers a range of bacterial habitats and how bacteria are able to live where they do. An updated (2015) expanded second edition of this book is available ISBN 978-1515350385
