

Electric Steering: A Revolution in Steering Technology / Daniel J. Holt

This report profiles the ongoing development and unlimited potential of electric steering technology - a cutting-edge innovation expected to fundamentally change the way automobiles are designed, produced, and marketed. As part of SAE's Technology Profile series, written by elite experts on the automotive industry's hottest technologies, this high-level report offers the most current and complete information on how this revolutionary new steering system has evolved, when it is likely to hit the market, and the effects its implementation will have on America's largest manufacturing industry. Written for strategic decision-makers and other professionals who need complete information fast, *Electric Steering: A Revolution in Steering Technology* also provides a concise overview of how the electric steering system actually works, as well as the technical hurdles facing its future development. Author Daniel J. Holt, former editor-in-chief of *Automotive Engineering International*, lends his renowned expertise to deliver one of the most indispensable technology reports on the market. Contents include: Steering basics Electrohydraulic power steering Electric steering Four-wheel steering The market drivers The Future References.
