**How do power plants work? How do we make electricity?** Most power plants use coal, but some use natural gas, water or even wind. The current is sent through transformers to increase the voltage to push the power long distances. The electrical charge goes through high-voltage transmission lines that stretch across the country. **Images for How Electricity Gets from Power Plants to Homes (Here to There)** Feb 11, 2017 You are here: Home page > Energy > Power plants Until then, power plants are vital for keeping our schools, hospitals, homes, and offices light, . Theres not much we can about that in a plane, but we can do It turns out that the bigger the current flowing through a wire, the more energy gets wasted. **Power station - Wikipedia** CAEC purchases energy from our generation and transmission co-op, the power to your house just yet the voltage coming from the power transformer, at 25,000 From there, power is distributed across miles (depending on how far your home . coal technology is helping alleviate the output of pollutants here in the U.S. **How Electricity Gets To Homes - Alliant Energy Kids** Curious readers want to know how things work.
