

## How To Invent (Beyond the Rubiks Cube)

Invention is a big part of daily life and anyone can be an inventor. This book breaks the invention process down into eight easy-to-follow steps and offers tips and examples for every stage. With a particular focus on inventing toys and puzzles, How to Invent shows aspiring inventors how and why the Rubiks Cube was invented and the problems Erno Rubik encountered along the way. There are also case studies of inspirational young inventors, such as gymnast George Nissen, who invented the trampoline at the age of 16.
