

Advanced Hybrid and Electric Vehicles: System Optimization and Vehicle Integration (Lecture Notes in Mobility)

This contributed volume contains the results of the research program Agreement for Hybrid and Electric Vehicles, funded by the International Energy Agency. The topical focus lies on technology options for the system optimization of hybrid and electric vehicle components and drive train configurations which enhance the energy efficiency of the vehicle. The approach to the topic is genuinely interdisciplinary, covering insights from fields. The target audience primarily comprises researchers and industry experts in the field of automotive engineering, but the book may also be beneficial for graduate students.
