

Social Program Implementation: Quantitative Studies in Social Relations

Quantitative Studies in Social Relations: Social Program Implementation provides information pertinent to implementation problems in social policy areas. This book discusses the greatest difficulty in devising better social programs. Organized into five parts encompassing 12 chapters, this book begins with an overview of implementation problems in federally funded programs. This text then focuses on the social agency where the many bureaucratic problems in multilayered structure clearly illustrate crucial implementation issues. Other chapters consider the structure and incentive systems of public schools as they relate to the adoption of innovations and to their implementation in the schools. This book discusses as well the idea of planned variation from the perspective of a model sponsor. The final chapter deals with crucial impediment to improving complex operating programs, policy analysis, and experimentation in social policy areas. This book is a valuable resource for policy planners, administrators, and analysts. Researchers engaged in social policy studies will also find this book useful.
