

Synthesis and Applications of Isotopically Labeled Compounds

This volume provides an authoritative and comprehensive coverage of the most recent advances in the production, synthesis, analysis and applications of isotopically labelled compounds. It focuses especially on areas of significant growth since the immediately preceding Seventh International Isotope Society Meeting held in Dresden, Germany in June 2000. Contributions are drawn from major research groups around the world, providing valuable information to research community with interests in the following areas: New methodologies in the production of isotopes Novel synthetic and biosynthetic approaches to isotopically labelled compounds Analysis of isotopically labeled compounds Application of isotopically labelled compounds in medical, agricultural, nutritional and environmental research and development Investigation and elucidation or organic and bioorganic mechanisms and pathways Regulatory and safety perspectives The next Symposium in this series will be held at Edinburgh, Scotland in the summer of 2006.
