

The Alkali Metals: Lithium, Sodium, Potassium, Rubidium, Cesium, Francium (Understanding the Elements of the Periodic Table)

The alkali metals are a group of six very useful elements--lithium, sodium, potassium, rubidium, cesium, and francium. In fact, you could not live without the elements of sodium and potassium. Your body needs them to function correctly. The alkali metals found in the far left-hand side of the periodic table. The periodic table of elements is a chart that chemists use to organize all of the known chemical elements. This book will help with the understanding of the Elements of the Table. By Kristi Lew.
