

A Brief & Agile Introduction to Scrum: The Easy Project Management Guide from Beginner to Advanced!

Speed Is King The field of collaborative product development is an ever-changing battlefield, with numerous ways to be able to deal with modern societys increasing demands. With every shift of the technological stream, creators are constantly forced to adapt to a myriad of new requirements and limitations, such as emerging scripting languages, hardware limitations, or the introduction of new markets and clientele. Effective process management strategies are extremely invaluable when it comes to rapid product deployment. We no longer live in an era wherein it takes an average of years in order to create a product that is immediately marketable; a garage team can create one in the span of a few months, weeks or even days depending on the complexity of the product and the scope of the project.
