

## Prentice Hall Universal Molecular Models

This scientifically accurate molecular model set demonstrates the framework of a molecule, the space-filling capacity of a molecule, and molecular orbitals. Efficiently designed and constructed, the UMM set is fully compatible with the FMM set and features color-coded atomic valence spheres and connectors, allowing students to represent all molecules having up to 12 atoms in their valence shells. This revolutionary educational resource provides the means for representing looped and helical structures, unshared electron pair lobes, pi orbitals, and the points of saturation and steric hindrance in molecules.
