About the Author: Helen Frost **Simple Machines: Lever, Inclined Plane & Pulley - Video & Lesson** A lever is a machine consisting of a beam or rigid rod pivoted at a fixed hinge, or fulcrum. A lever is a rigid body capable of rotating on a point on itself. On the basis of the location of fulcrum, load and effort, the lever is divided into three types. It is one of the six simple machines identified by Renaissance scientists. .. Look up lever in Wiktionary, the free dictionary.
